

## Veterinary Data Logger Testimonials

"The Data Logger software proved to be user friendly and was easy to teach employees how to operate and use. The Data Logger was nice in that it gave us a way to audit the anesthetic monitoring skills of new and current employees...We see this as an asset when training employees how to monitor a patient under anesthesia."

"We currently use the veterinary software Cornerstone by Idexx in our clinic. We found that you could easily transfer data from the Data Logger into Cornerstone and then into each patient's personal record. This is nice from a legal standpoint because you have an accurate record of your patient's vitals that can be accessed and reviewed at any point in the future. You also know that the data being stored is true and accurate coming out of the SurgiVet® Advisor® Vital Signs Monitor and into the Data Logger, and is not open to human error or miscalculation."

*Adam Richner  
Surgical Technician  
Meridian, Idaho*

"Record-keeping has taken on many needs. In the clinical setting you need to be able to explain metabolic or physiological problems to the pet owner. The charted data produced by the Data Logger supports this need along with allowing for detailed diagnosis discussions whether in the research, teaching or clinical setting. Being able to accumulate the expanded data detail on the memory chip, has freed up my hands to focus on the patient, the procedure and the needs of the surgeon."

*Kim Mauer  
Research Specialist  
Madison, Wisconsin*

"We have been using the SurgiVet® Advisor® as our sole surgical monitor for 3 years and have been very pleased with the results. The addition of the Data Logger has streamlined our surgical logging and integrates extremely well with our electronic medical records—no more scanning of our hand recorded logs. With a few clicks of the mouse all of the pertinent information is attached as a spreadsheet."

*Joseph C. Cooney  
DVM  
Statesville, North Carolina*

"I have been using the SurgiVet® Advisor® for approximately 2 years and was recently asked to try the Data Logger...it worked very easily with the SurgiVet® Advisor®, it required almost no training by my staff. After using it twice it easily became part of our normal monitoring routine for surgeries. Also, transferring and printing of the entire surgery was very simple."

*Stephen Holowinski  
DVM  
Johnson City, New York*
